

Enterprise Mobility Suite

Keep your employees productive and your company data protected – at all times.

It could take hundreds of thousands of euros and countless hours to build your corporate data and only a second to lose it. Compromised or lost business information can cost your organization millions in downtime, lost research, regulatory fines, litigation settlements and tarnished brand reputation.

How do you keep your employees productive on their mobile devices while keeping your data secure? With Microsoft Enterprise Mobility Suite (EMS).

Your trusted Microsoft partner

Comtrade mobile security specialists have experience implementing Microsoft Azure technologies and customizing them to fit your business needs.

We will work with you to help you select the right MS licenses, configure Microsoft Azure EMS services and provide you with ongoing support.

EMS helps reduce security risks and enables workers to be more productive with features like:

- Identity and access management
- Information protection
- Device and application management

Enterprise security needs

EMS can help...

Control access to confidential data

Implement multi-factor authentication (MFA) to help prevent unauthorized access. Secure information across file servers, email and collaboration platforms with document tracking and encryption.

Lock down devices to make remote workers more efficient

Enforce security policies on corporate-owned or personal devices to prevent data theft, even if devices are lost or stolen.

Avoid regulatory fines

Centrally manage and secure devices so that they comply with industry and government regulations for information security. Quickly provision and deprovision identities and access for new, temporary or exiting employees.

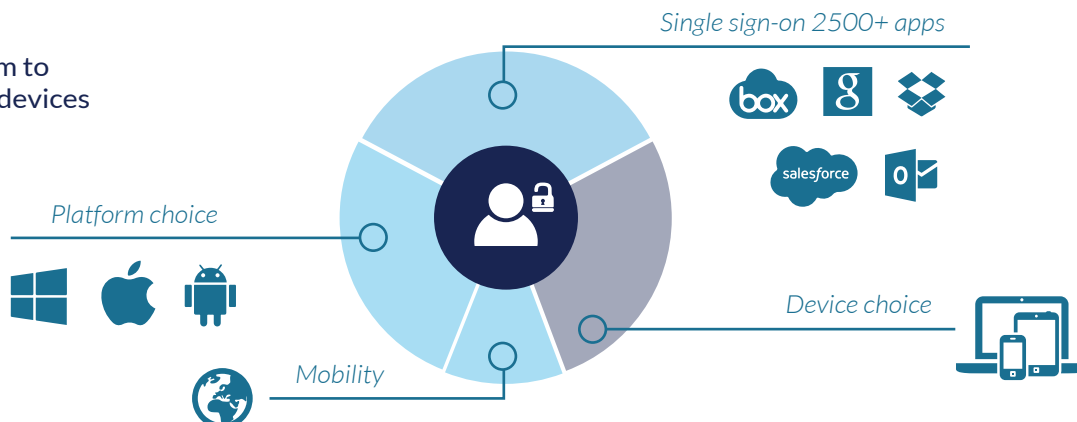

Prevent negative brand exposure and litigation costs

Identify cyber attacks before data is compromised using behavior-based analytics that leverage Machine Learning to inspect all network traffic.

Provide all workers with simple, secure access to 2,500+ apps

Enable single sign-on (SSO) so workers only need one password or biometric/PIN combination to access all the applications they need.

Single identity platform to secure data, apps and devices

Why EMS is right for your business

EMS includes Azure Active Directory, Azure Rights Management, Microsoft Intune and Advanced Threat Analytics to provide organizations with cost-effective, comprehensive security for users, devices, applications and data.

Secured, flexible access to company resources

- Single sign-on to any application on your favorite device
- Corporate policy enforcement for accessing resources from corporate or personal devices
- Managed access to more than 2,500 pre-integrated SaaS applications, as well as your own custom cloud or on-premises hosted web application

Layered protection against data theft

- Trusted multi-factor authentication engine that processes billions of requests every week
- Data encryption that follows documents everywhere

Low licensing and implementation costs

- Comprehensive security coverage for nearly half the price of third-party solutions
- Self-service password reset can reduce Help Desk calls by an average of 25%
- Simple set-up, always up to date, and connects to your on-premises data center
